

Wide Awake Lipo. The Really Smart Lipo. Vaser Supersculpt.

Vaser Liposuction FAQ

All Vaser Procedures are performed by Dr. Vin Pathy, Double Board Certified Plastic Surgery. Dr. Pathy is an experienced Surgeon who's surgical skills combined with his artistic skills lead to exceptional results that are sought by many people who travel great distances to see him.

How does Vaser Liposuction work?

A very small cannula (tube) approximately 1.0 mm in diameter is inserted underneath the skin. The cannula is moved back and forth and ultrasound breaks up the fat making it easy to drain away. The ultrasound energy also interacts with the dermis resulting in skin shrinkage or tightening.

Due to the cannula's small size, VaserLipo is a minimally invasive procedure and can be performed while wide awake with local anesthesia.

How is VaserLipo different?

- Vaser uses ultrasound and is the preferred method of Liposuction by many of the leading top Plastic Surgeons
- VaserLipo is "tissue selective" which means that the ultrasound specifically targets fat and not blood vessels and tissue, resulting in less bleeding and trauma and shorter recovery periods than traditional Liposuction.
- Vaser is done while you are wide awake, thus eliminating the cost and risk of anesthesia.

*Treats unwanted fat and fat tissue irregularities

*Improves flabby or lax skin

*Minimal edema (swelling), and bleeding due to the Vaser's highly specific properties

*Minimal bruising

As with any technology, the Technology is only as good as the Doctor who operates it. Dr. Pathy is a meticulous Plastic Surgery who's skill and artistry yield superior results. Dr. Pathy's patient testimonials speak for themselves.

Who is a good candidate for the procedure?

If you have areas of fat that will not respond to diet and exercise, then you're a candidate for VaserLipo. Ideal candidates are in good health, of about normal body weight and have realistic expectations.

What body regions can be treated with VaserLipo?

Vaser Lipo is ideal for treating the “turkey neck”, mandible, arms, love handles, abdomen, thighs, knees and bra fat.

Vaser SuperSculpt is used on those who want a “ripped” or chiseled look. This advanced procedure sculpts abdomen to show the musculature and revealing a six pack or highly defined stomach.

Can the fat that is removed be placed somewhere else?

YES! Dr. Pathy is very experienced in the art of fat transfer. Utilizing a sterile collection system the fat is separated and then re-injected to replace lost volume. Fat can be transferred to the face, hollows under the eyes, lips and buttocks.

How much does it cost?

Prices start from \$2000, depending on the size of the area.
